

Isarva Restaurant POS

Customer User Guide

Field	Value
Document ID	ISARVA-CG-001
Title	Customer User Guide - Complete setup, Settings, floor ticket actions, stock, reports and all modules
Version	1.2
Language	Simple English (for restaurant customers)
Product	Isarva Restaurant POS
App URL	https://app.restaurant-pos.isarva.in
Audience	Restaurant Owner / Admin / Staff
Organisation	Isarva

Welcome

This guide helps you set up and use **Isarva Restaurant POS** in a simple way.

Please follow the steps **one by one**. Do not skip the early steps.

If something is not clear, ask your Isarva support person or your restaurant Admin.

Part A — Before you start

What you need

1. A computer, laptop, or tablet with internet.
2. Google Chrome or Microsoft Edge browser (recommended).
3. Your **Company Code** (given by Isarva).
4. Your **Admin username** and **password / PIN** (given by Isarva).
5. Your restaurant name, VAT / tax details, and branch address ready.

Important tips

1. Keep your password secret. Do not share it with everyone.
2. Always select the correct **branch** before taking orders.
3. If the screen shows **Offline**, you can still take some orders, but sync will happen when internet comes back.
4. Do not store customer card numbers in order notes.

Part B — First-time setup (do this only once per till)

Step 1 — Open the POS website

1. Open your browser.
2. Go to: <https://app.restaurant-pos.isarva.in>
3. Wait for the login / activate screen to open.

Step 2 — Activate this POS for your restaurant

This is the **first and most important step**.

1. On the screen, find **Activate POS** (or company code box).
2. Type your **Company Code** given by Isarva.
Example: c001 (You can also use VAT / tax ID if Isarva registered that for you.)
3. Company code must be at least **3 characters**.
4. Tap or click **Activate POS**.
5. Wait until the screen shows your restaurant name.
6. If activation fails, check the code again. If still failing, call Isarva support.

After activation, this till belongs to your restaurant only.

Step 3 — Sign in as Admin

1. Enter your **Admin username**.
2. Enter your **PIN or password**.
3. Tap **Sign in**.
4. You should see the Home / main menu.

If login fails:

1. Check Caps Lock.
2. Tap **Refresh** on the login screen and try again.
3. Ask Isarva if your user is active.

Step 4 — Choose language (optional)

1. Use the language switch (EN / AR) if you need Arabic.
2. You can change language anytime later.

Step 5 — Set company and branches

1. Open **Settings**.
2. Open **Company & Branches**.
3. Check your company name, logo (if any), and VAT details.
4. Add each branch of your restaurant (name, address, phone).
5. Save the details.
6. On the top bar, **select the correct branch** for this till.

Note: Day close, tables, and stock work **per branch**. Always check the branch name before work.

Step 6 — Fill company tax / ZATCA details (KSA)

1. Open **Settings** → **Company Details** (or ZATCA / tax section).
2. Enter correct company legal name, address, and VAT number.
3. If Isarva enabled ZATCA Phase 2 for you, complete the onboarding checklist only with support guidance.
4. Do not share ZATCA private keys on WhatsApp or email.

Step 7 — Create your menu (Masters)

Follow **Part N** (Products / catalog) in detail. Short path:

1. Open **Masters** (or Settings → Products).
2. Create **Categories**, then **Dishes**.
3. Create **Addons** and **attach** them to dishes.
4. Set **Tax**, **Units**, **Departments**, **Extra Charges** as needed.
5. Sync other tills after save.

Step 8 — Create floor tables (for dine-in)

Follow **Part L12–L13**. Short path:

1. Settings → **Table Area**, then **Table Management**.
2. Create areas, then tables.
3. Confirm on **Dine-in** floor.

Step 9 — Create staff users

Follow **Part O**. Short path:

1. Settings → **User** tab → User list / Roles / Privileges / PIN.
2. Add each staff with correct role and branch.
3. Do not share one Admin login with all staff.

Step 10 — Set payment types, printers, and stock basics

1. **Payment types** — Part P2.
2. **Printers + mapping** — Part M (do a test print).
3. If you track inventory: **Vendors, Storage locations, Ingredients** — Parts L8, Q, R.
4. Save everything.

Step 11 — Quick test before real customers

1. Open one test table or takeaway order.
2. Add 1–2 items.
3. Send to kitchen (if you use kitchen).
4. Settle with cash as a test.
5. Confirm receipt looks correct.
6. If test is OK, you are ready for live use.

Part C — Daily opening checklist

Do this every morning:

1. Open the POS website.
2. Sign in with your own user.
3. Confirm top bar shows correct **branch**.
4. Confirm status chip shows **Online** (if internet is available).
5. Confirm menu and tables look correct.
6. Check printer paper (receipt / kitchen) if you use printers.
7. Start taking orders.

Part D — How to take a dine-in order (Floor)

This part explains the **Dine-in / Floor** ticket screen — including Discount, Extra charges, Tax (VAT), Save buttons, KOT, Split, Change Table, Merge Tables, and Settle.

Step 1 — Open the table

1. Tap **Dine-in**.
2. Select the guest table.
3. Open / seat the table (enter number of guests if asked).

Step 2 — Add food items

1. Choose category.
2. Tap the dish.
3. Select quantity.
4. Add notes if needed (Example: "No onion", "Less spicy").
5. Select add-ons if the screen shows them.
6. Add the item to the order.
7. Check **Subtotal** on the right side of the ticket.

Step 3 — Understand the bill totals (Tax / VAT)

On the right ticket panel you will see:

1. **Subtotal** — food total before discount.
2. **Discount (%)** — money reduced after you pick a discount %.
3. **Extra charges** lines — if you switched on any charge (Example: Service charges, Parking).
4. **VAT / tax lines** — tax is calculated by the system from Tax settings and item tax. You normally do **not** type tax by hand on the floor.
5. **Total** — final amount (includes VAT when tax is on).

Important: To change tax rates for the restaurant, Admin must go to **Settings** → **Tax** (and Tax Update / Menu details). On the floor you only *see* tax on the bill.

Step 4 — How to use Discount on the floor

1. Open the table ticket (items already added).
2. Find the **DISCOUNT** row under the totals.
3. Tap a percent button: **0%**, **7%**, **10%** (or other % your Admin set in Settings → Discount).
4. The active button becomes dark.
5. Check that Discount amount and **Total** updated.
6. Tap **0%** if you want to remove discount.

Notes:

- Only use discount if your shop allows it.
- Discount % is for this table ticket.
- If no % buttons show, Admin must create discounts in **Settings** → **Discount**.

Step 5 — How to use Extra Charges on the floor

1. Extra charges must first be created in **Settings** → **Extra Charges** (and set Active).
2. On the table ticket, find **EXTRA CHARGES**.
3. Tap a charge pill to **turn it ON** (Example: "Service charges as per policy · SAR 150.00").
4. Tap again to **turn it OFF**.
5. When ON, the charge line appears in the totals and **Total** increases.
6. Tax on that charge (if configured) is handled by the system.

Examples you may see: Service charges, Parking Charges, packing fee, and so on.

Step 6 — Save / Save & Print / Save & Bill

These three buttons keep the order without finishing payment.

Button	What it does	When to use
Save	Saves the ticket in the system	Guest will order more later; you need to leave the screen

Button	What it does	When to use
Save & Print	Saves and prints a slip	Guest or waiter needs a printed copy now
Save & Bill	Saves and opens / prints guest bill preview (temp bill style)	Guest asked for the bill to review before pay

Steps:

1. Add items first (buttons stay disabled if the ticket is empty).
2. Tap **Save**, or **Save & Print**, or **Save & Bill**.
3. Confirm print came on the receipt printer if you chose print.

Food Server tip: Use **Save & Bill** when guest wants to see the bill. Final money collection is usually **Settle** by Cashier/Admin.

Step 7 — Send to kitchen: KOT and KOT & Print

Button	What it does
KOT (may show number like KOT (2))	Sends pending items to kitchen / KDS. Number = items waiting to send
KOT & Print	Sends pending items (if any) and prints kitchen / bill slip as designed

Steps:

1. After adding new items, tap **KOT**.
2. Confirm kitchen screen or KOT printer got the order.
3. Use **KOT & Print** if you also need paper in hand.
4. If nothing is pending, system may say there is nothing to send — that is normal.

Do not only Save if kitchen must cook — always send **KOT** for new food.

Step 8 — Change Table

Use when guests move to another table.

1. Open the current table ticket.
2. Tap **Change Table**.
3. Select the new empty / target table.
4. Confirm.
5. Old table should become free; order now shows on the new table.
6. Check floor map once.

Who can do this: users with Change Table permission (usually Food Server / Admin).

Step 9 — Merge Tables

Use when two tables want **one combined bill**.

1. Open the **main / host** table (the table that will keep the bill).
2. Tap **Merge Tables**.
3. Select the other table(s) to merge into this one.
4. Confirm merge.
5. Items from linked tables come onto the host bill.
6. Floor may show a **Merged** badge.
7. Settle once on the host table.

Tips:

- Merge carefully — confirm with guests first.
- After merge, pay on the host table.

- If you are not sure, ask Admin before merging busy tables.

Step 10 — Split (open Settle in split mode)

Split on the floor opens the **Settle** window ready for split payment (one bill, many payment methods or people).

1. Open table ticket.
2. Check Total is correct (discount / charges / VAT ok).
3. Tap **Split**.
4. Settle window opens (see Part E for Equal / Custom split and payment steps).
5. Add payments until **Remaining is SAR 0.00**.
6. Tap **Confirm split** (or confirm settle).

Step 11 — Settle (full payment)

1. Open table ticket.
2. Tap **Settle** (brown / main pay button).
3. Settle window opens: **Settle — Table XX**.
4. Amount due shows **incl. VAT**.
5. Follow Part E to take cash / card / voucher / split.
6. After success, table becomes free.

Step 12 — Add more items later

1. Open the same table again.
2. Add new items.
3. Tap **KOT** again for the new items only.
4. Update discount / extra charges if needed before final Settle.

Part E — Settle screen (payment, split, food voucher, gift card)

This is the window titled **Settle — Table XX** (same idea for Takeaway / Quick Serve / Barcode settle).

E1 — What you see on Settle

1. **Amount due ... incl. VAT** — total to collect (tax already included when tax is on).
2. **Equal / Custom** tabs — for split bills.
3. **Remaining** bar — how much is still unpaid.
4. Quick buttons like **Rest** → **Cash**, **Rest** → **mada**, **Rest** → **Visa / Mastercard**, **Rest** → **Apple Pay**, **Rest** → **STC Pay**, channel names if enabled.
5. **Fill remaining / Half remaining** — fill amount boxes fast.
6. Payment type dropdown + amount + **Add**.
7. **Confirm split / confirm pay** — enabled only when Remaining is **0.00**.

E2 — Pay full bill with one method (simple)

1. Tap **Settle** from floor.
2. Tap **Rest** → **Cash** (or mada / Visa / etc.).
3. Or choose payment type, tap **Fill remaining**, then **Add**.
4. When Remaining is **SAR 0.00**, confirm.
5. Give receipt to guest.

E3 — Equal split (same amount to many people)

1. Open Settle (or tap **Split** on floor).
2. Tap **Equal**.
3. Choose number of parts if asked (2, 3, 4...).
4. Take each part's payment (cash/card as needed).
5. Confirm when Remaining is 0.

E4 — Custom split (different amounts / methods)

1. Open Settle → tap **Custom**.
2. Remaining shows full amount first.
3. Choose method (Cash, mada, Visa...).
4. Enter amount (or tap **Half remaining** / **Fill remaining**).
5. Tap **Add**.
6. Remaining reduces.
7. Add next payment until Remaining is **SAR 0.00**.
8. Tap **Confirm split**.
9. If Confirm is grey, some amount is still remaining — add more payment.

Example: Guest pays SAR 200 cash + rest on mada.

E5 — Food voucher on Settle

1. Food vouchers must be created first in **Settings** → **Food vouchers**.
2. On Settle, open **Food voucher** payment option (voucher / food voucher button or pay type).
3. Enter or select voucher code as the screen asks.
4. Confirm voucher amount applies (it reduces amount due).
5. Pay any **Remaining** by cash/card.
6. Finish settle only when Remaining is 0.
7. Used voucher should not be reused.

E6 — Gift card on Settle

1. Gift cards are created in **Settings** → **Gift cards**.
2. On Settle, choose gift card pay option.
3. Enter card number / scan as guided.
4. Apply amount.
5. Pay remaining balance with another method if needed.
6. Confirm settle.

E7 — Loyalty points (if guest in CRM)

1. Select / search customer on Settle if shown.
2. Enter points to redeem if allowed.
3. Due amount reduces.
4. Pay remaining normally.

E8 — Card / mada / wallets

1. Choose **mada**, **Visa / Mastercard**, **Apple Pay**, **STC Pay**, etc.
2. Follow SoftPOS / terminal steps.
3. Wait for real approval.

4. If terminal is not ready, payment will not approve — call Admin (Settings → Card / SoftPOS).

E9 — If payment fails

1. Keep the ticket open. Do not force-close.
2. Try again or change method.
3. For split, remove wrong line if the screen allows and re-add.
4. Call Admin.

E10 — Same buttons on other sections

These work in a similar way (where the screen has them):

Section	Discount / Extra charges	KOT / Save	Settle / Split / Voucher
Dine-in (Floor)	Yes	Yes	Yes
Takeaway	Usually yes	Send / KOT style	Settle + voucher
Drive-thru	Usually yes	Send	Settle
Quick Serve	As shown	Fast cart	Settle
Barcode	As shown	-	Settle
Delivery / Online	Channel rules	Send kitchen	Settle / prepaid as designed

Always check **Total incl. VAT** before you confirm pay.

Part F — Takeaway / drive-thru

1. Open **Takeaway** or **Drive-thru**.
2. Create a new order.
3. Add items and notes.
4. Send to kitchen if required.
5. Take payment as per your shop rule (before or at handover).
6. Mark order completed when guest collects food.

Part G — Delivery and online orders

Delivery / aggregator orders

1. Open **Delivery** or **Online**.
2. Check new orders from apps (HungerStation, Jahez, etc. if connected).
3. Confirm items and address.
4. Send to kitchen.
5. Assign rider when ready.
6. Update status as per your process.

Guest QR menu (if enabled)

1. Admin opens Online settings and copies the **QR menu link**.
2. Make sure the link has the correct company code (co=).
3. Guest opens link on phone, selects items, and places order.
4. Order comes into your Online / takeaway queue.
5. Staff prepares and completes it like other orders.

Part H — Kitchen screen (Kitchen Manager)

1. Sign in as Kitchen Manager.
2. Open **Kitchen**.
3. Choose board if shown: All / Kitchen / Bar / Expo.
4. Read item notes carefully (spice level, allergy notes).
5. Mark item started / done (bump) when ready.
6. Do not bump wrong station items.
7. If an item is finished in stock (86), tell Admin and floor immediately.

Part I — Delivery rider

1. Sign in on phone/tablet as Rider.
2. Open **Delivery**.
3. Open your assigned order.
4. Check address and phone.
5. Mark **started** when you leave restaurant.
6. Mark **delivered** when guest receives order.
7. If cash on delivery, give cash to Cashier as per shop rule.
8. If guest not reachable, call restaurant. Do not throw food without approval.

Part J — Day close (Admin / authorised user)

1. Make sure open tables are settled as much as possible.
2. Open **Back Office / Day close** (Accounts area).
3. Count cash in drawer.
4. Compare with system cash sales.
5. Enter counted amount.
6. Confirm day close for **this branch**.
7. Keep the day-close report for accounts.

Remember: Day close is separate for each branch.

Part K — How to open Settings (all modules)

1. Sign in as **Admin**.
2. From Home or left menu, open **Settings**.
3. At the top of Settings you will see tabs. Open each tab for related options:

- **Business**

- **Printer**

- **Products** (catalog and pricing)

- **User**

- **Accounts**

- **Ingredients**

- **Inventory**

- **Database**

4. Tap any tile to open that module.
5. If a tile says “coming later”, that feature is not ready. Please skip it.

Part L — Settings → Business

L1. Company Details

Where: Settings → Company Details

1. Open **Company Details**.
2. Enter restaurant brand name and legal name.
3. Enter VAT / tax number and address carefully.
4. Add or edit **Branches** (each outlet).
5. Save.
6. On the till top bar, select the branch you are working on.

Do this first after you Activate POS.

L2. ZATCA e-invoice setup

Where: Settings → Company Details (ZATCA section)

1. Open company tax / ZATCA area.
2. Fill seller details needed for KSA e-invoice.
3. For Phase 2 onboarding (OTP, CSID), do only with Isarva support.
4. Do not share private keys on WhatsApp or email.

L3. ZATCA invoice queue

Where: Settings → ZATCA invoices (queue)

1. Open the invoice queue.
2. Check status: pending, failed, reported.
3. Retry failed invoices if the button is available.
4. If many invoices keep failing, call Isarva support.

L4. Customers (CRM)

Where: Settings → Customers, or menu **CRM**

1. Search guest by phone or name.
2. Add new customer if needed.
3. Check loyalty points.
4. Save changes.

L5. Gift cards

Where: Settings → Gift cards

1. Open Gift cards.
2. Create or issue a gift card with value.
3. Note the card number for the guest.
4. At payment time, Cashier can redeem the gift card.
5. Always check balance before redeem.

L6. Food vouchers

Where: Settings → Food vouchers

1. Create food voucher as per your offer.
2. Set value and rules as shown on screen.
3. Redeem at settle when guest shows voucher.
4. Do not issue too many vouchers without control.

L7. Loyalty campaigns

Where: Settings → Loyalty campaigns

1. Open Loyalty campaigns.
2. Set birthday bonus if you want.
3. Set visit punch-card rules (Example: after 5 visits, give reward).
4. Save.
5. Train Cashiers to search guest phone at bill time.

L8. Vendors (suppliers)

Where: Settings → Vendor, or menu **Vendors / Suppliers**

1. Add supplier name, phone, and details.
2. Save vendor.
3. Use this vendor later in Purchase Orders and Stock receiving.

L9. Delivery Boy (riders)

Where: Settings → Delivery Boy

1. Add rider name and phone.
2. Save.
3. On Delivery orders, assign this rider.
4. Rider login may use last 4 digits of phone (as configured).

L10. Notification settings

Where: Settings → Notification Settings (with Delivery Integrations)

1. Open notifications / alerts section.
2. Turn on the alerts you need.
3. Save.
4. Check notify log if alert did not come.

L11. Delivery APIs (aggregators)

Where: Settings → Delivery APIs / Delivery Integrations

1. Open Delivery Integrations.
2. Select channel (Example: HungerStation, Jahez, Keeta).
3. Enter API credentials from the platform.
4. Tap **Test connection**.
5. Use live orders only after test success.
6. If test fails, do not guess keys — call support.

L12. Table Area

Where: Settings → Table Area (Floor)

1. Create areas: Indoor, Outdoor, Family, and so on.

2. Set active / order if the screen shows it.
3. Save.
4. Areas appear in Dine-in floor filter.

L13. Table Management

Where: Settings → Table Management

1. Add tables (Table 1, Table 2...).
2. Set seats and area.
3. Save.
4. Open Dine-in and confirm tables show on floor map or list.

L14. Menu timetable

Where: Settings → Menu timetable

1. Open Menu timetable.
2. Set which menu or items are available at which time (breakfast, lunch, dinner).
3. Save.
4. At that time, check that only correct items show.

L15. Addons

Where: Settings → Addons

1. Create addon groups (Example: Extra toppings, Cooking style).
2. Add options and prices.
3. Go to Masters → dish → **attach** addon to the dish.
4. If you do not attach, addon will not show while ordering.

L16. Card / SoftPOS terminal

Where: Settings → Card / SoftPOS

1. Open Card terminal settings.
2. Check bridge / terminal status.
3. Use demo simulate only for training. Turn it off for live sales.
4. Live card payment needs a working bridge. Otherwise payment will not approve.

L17. Counter / Quick serve

Where: Settings → Counter, or menu **Quick Serve**

1. Use for fast counter orders without table.
2. Add items → take payment → finish.

Part M — Settings → Printer

Open **Settings** → tab **Printer**.

M1. Receipt Printer

Where: Settings → Printer → Receipt Printer

1. Open Receipt Printer.
2. Select printer or station.
3. Set copies and paper width if asked.
4. Set header and footer text (shop name, VAT, thank you note).

5. Save.
6. Print one test receipt after a test bill.

M2. KOT Printer

Where: Settings → Printer → KOT Printer

1. Open KOT Printer.
2. Add kitchen print station(s).
3. Save.
4. Send a test KOT from Dine-in and confirm print in kitchen.

M3. Printer Mapping

Where: Settings → Printer → Printer Mapping

1. Open Printer Mapping.
2. Map each department or station to the correct KOT printer.
Example: Hot kitchen → Kitchen printer, Juice → Bar printer.
3. Save.
4. Wrong mapping means ticket prints in the wrong place.

M4. Print designs / templates

Where: Settings → Printer → Print designs

1. Open print templates.
2. Choose receipt or kitchen template style.
3. Preview if available.
4. Save.
5. Do a real test print before busy service.

Part N — Settings → Products (Catalog and pricing)

Open **Settings** → tab **Products**.

N1. Department List

Where: Settings → Department List

1. Create departments (Kitchen, Bar, Grill, and so on).
2. Set colour if shown.
3. Departments help KOT routing and menu structure.
4. Save.

N2. Menu items (Masters dishes)

Where: Settings → Menu items, or **Masters** → Dishes

1. Create categories first (Main / Sub).
2. Add dish: name, price, department, tax.
3. Add photo if you want.
4. Attach recipes, addons, and customizer as needed.
5. Save and sync other tills.

N3. Menu details (tax and photos)

Where: Settings → Menu details

1. Open Menu details.
2. Assign tax to products.
3. Update photos and extra product fields.
4. Save.

N4. Tax

Where: Settings → Tax

1. Open Tax master.
2. Confirm VAT rate (Example: 15% in KSA).
3. Save.
4. Do not change tax casually after go-live without accounts advice.

N5. Tax Update (bulk)

Where: Settings → Tax Update

1. Open Tax Update.
2. Apply tax to many products together.
3. Confirm before save.
4. Check 1–2 sample bills after update.

N6. Discount master

Where: Settings → Discount

1. Create discount types your shop allows.
2. Save.
3. Only authorised roles should give discount.

N7. Units

Where: Settings → Units

1. Add units for stock and recipes (kg, g, litre, piece, and so on).
2. Save.
3. Use the same units in ingredients and recipes.

N8. Extra Charges

Where: Settings → Extra Charges

1. Add charges like service charge, packing, delivery fee.
2. Set tax on charge if required.
3. Save.
4. Confirm charge appears on bill when applied.

N9. Beverages Quantity Master

Where: Settings → Beverages Quantity Master

1. Define beverage sizes or quantities (Small, Large, 330ml, and so on).
2. Save.

N10. Beverages Price Master

Where: Settings → Beverages Price Master

1. Set price for each beverage quantity.
2. Save.

3. Test one beverage order.

N11. Online Price List / Online orders

Where: Online module

1. Open **Online**.
2. Check online order types and channel prices if separate.
3. When menu price changes, update online prices also.

Part O — Settings → User

Open **Settings** → tab **User**.

O1. User list

Where: Settings → User list

1. Add staff: username, name, role, branch access.
2. Set active status.
3. Save.
4. Share login only with that staff person.

O2. Roles

Where: Settings → Roles

1. Review roles: Admin, Cashier, Food Server, Kitchen Manager, Rider.
2. Create custom role only if needed.
3. Do not give Admin to everyone.

O3. Role Privilege

Where: Settings → Role Privilege

1. Open privileges for a role.
2. Tick only what that job needs (settle, stock, masters, back office, and so on).
3. Save.
4. Ask staff to sign out and sign in again so rights refresh.

O4. PIN / Login

Where: Settings → User list (PIN section)

1. Set or reset staff PIN or password.
2. Tell staff to keep PIN secret.
3. When staff leaves the job, disable user the same day.

Part P — Settings → Accounts (and Accounts hub)

Open **Settings** → tab **Accounts**, or menu **Accounts**.

P1. Accounts hub

1. Open Accounts hub.
2. From here open payment types, expenses, ledger, day close, and related finance screens.

P2. Payment types

1. Keep Cash, Card, and other tenders active as you use them.
2. Disable unused types so cashier does not select wrong tender.

3. Save.

P3. Expense types

1. Create types: Rent, Electricity, Gas, Cleaning, and so on.
2. Save.

P4. Expense details

1. Log each expense with type, amount, date, and invoice note.
2. Save.
3. Use this for monthly cost and P&L report.

P5. Sales Ledger

Where: Back Office → Sales

1. Open sales ledger for the day.
2. Check tenders and sales totals.
3. Use this before day close.

P6. Day Close

Where: Back Office → Day Close

1. Settle open tables as much as possible.
2. Count drawer cash.
3. Enter counted amount.
4. Confirm day close for **this branch**.
5. Keep report for accounts.

P7. Shift (cash drawer shift)

Where: Back Office → Shift

1. Open or close cashier shift if your shop uses shift count.
2. This is different from staff time clock.

P8. Time clock

Where: Back Office → Time clock

1. Staff clock in and clock out.
2. Export hours if needed for salary.
3. This is attendance — not the same as day close.

Part Q — Settings → Ingredients

Open **Settings** → tab **Ingredients**.

Q1. Ingredient Master

Where: Settings → Ingredient Master

1. Add raw materials: name, SKU, unit.
2. Set preferred vendor and default storage if asked.
3. Save.
4. This screen is master data. On-hand quantity is in **Stock / Inventory**.

Q2. Menu item recipes

Where: Masters → open dish → recipe / ingredients

1. Open the dish.
2. Assign ingredients with quantity used per portion.
3. Save.
4. Good recipes help food-cost report and stock use (where enabled).

Q3. Recipe usage

Where: Settings → Recipe usage

1. Open Recipe usage.
2. See what each menu item consumes.
3. Fix wrong recipe quantity here if needed.

Part R — Settings → Inventory (Stock modules)

Open **Settings** → tab **Inventory**, or menu **Stock**.

R1. Storage locations

Where: Settings → Storage locations

1. Create locations: Main store, Kitchen, Bar, Walk-in, Pastry.
2. Save.
3. Use these in stock transfer.

R2. Yield conversions

Where: Settings → Yield conversions

1. Link raw item to prepped item (Example: whole chicken → cleaned chicken).
2. Set conversion factor.
3. Save.
4. Use when you produce or prep stock.

R3. Stock receiving

Where: Settings → Stock receiving

1. Open Stock receiving.
2. Select vendor or PO if linked.
3. Enter items and quantities received.
4. Confirm receive.
5. Open Stock Master — quantity should increase.

R4. Stock transfer

Where: Settings → Stock transfer

1. Open Stock transfer.
2. Choose from-location or branch and to-location or branch.
3. Add items and quantity.
4. Confirm transfer.
5. Check stock on both sides after transfer.
6. Do not transfer in system if you did not move stock physically.

R5. Purchase Order (PO)

Where: Purchase Orders menu, or Inventory → PO

1. Create PO for a vendor.
2. Add items and ordered quantity.
3. Save or send as per your process.
4. When goods arrive, receive against PO on receiving screen.
5. Close PO when complete.

R6. Stock Master (on-hand)

Where: Stock / Inventory

1. Open Stock list.
2. Search item.
3. Check on-hand quantity and value.
4. Adjust stock only with Manager approval (waste, count correction).
5. Enter reason for adjustment.

Suggested stock weekly flow

1. Raise PO → vendor delivers → **Stock receiving**.
2. Move store to kitchen with **Stock transfer**.
3. Sell food on POS (recipe usage where configured).
4. Check **Stock Summary** report.
5. Do physical count and adjust difference.

Part S — Settings → Database

Open **Settings** → tab **Database**. Use carefully. Wrong clean or import can remove live data.

S1. Export

1. Open Export.
2. Export catalog or data package you need.
3. Save file in a safe folder.
4. Export before big changes.

S2. Import

1. Open Import.
2. Choose the file given by Admin or Isarva.
3. Confirm import.
4. Check menu and stock after import.

S3. Backup

1. Open Backup.
2. Take backup before major setup change.
3. Store backup safely.
4. Restore only with guidance if something goes wrong.

S4. Data Cleaning

1. Use only on demo or training data, or with Isarva support.
2. Never clean live shop data by mistake.

Part T — Reports module (complete list)

Where: Menu → **Reports**

1. Open Reports.
2. Select the report name.
3. Set date range and branch.
4. Tap View.
5. Export or print if the button is shown.

Sales and profit reports

1. **P&L** — Sales, cost, expenses, and net for the period.
2. **Sales Summary** — Day or period sales totals.
3. **Hourly sales** — Which hour is busy.
4. **Sales by Channel** — Dine-in, takeaway, delivery, online, and so on.
5. **Sales by Item** — Top selling dishes.
6. **Payments Received** — Cash vs card vs other tenders.

Control and audit reports

7. **Void audit** — Who voided what, with reason.
8. **Discount report** (also in Back Office) — Discounts given.
9. **Food-cost variance** — Menu vs recipe and stock cost.

Stock and purchase reports

10. **Stock Summary** — On-hand quantity and value.
11. **Stock Summary Log** — Stock movement history.
12. **Purchase Order Log** — PO status and value.

Simple report routine

1. Every morning: yesterday Sales Summary + Payments Received.
2. Every week: Sales by Item + Void audit.
3. Every week: Stock Summary + PO Log.
4. Every month: P&L + Expenses.

Part U — Other daily modules (short guide)

U1. Home

1. See today's snapshot and shortcuts.
2. Open any module tile you need.

U2. Dine-in / Floor

1. Manage tables and dine-in orders (see Part D).

U3. Payments / Unsettled

1. Open unpaid tickets.
2. Settle remaining bills.

U4. Takeaway / Drive-thru / Quick Serve / Barcode

1. **Takeaway** — parcel orders.
2. **Drive-thru** — car pickup flow.

3. **Quick Serve** — fast counter.
4. **Barcode** — scan or type code and settle quickly.

U5. Delivery / Online / Courier

1. **Delivery** — own delivery and rider assign.
2. **Online** — aggregator and web orders; QR menu link for guests.
3. **Courier** — platform courier pickup board if you use it.

U6. Kitchen (KDS)

1. See Part H for bump and stations.

U7. Masters

1. Main place for categories and dishes (also linked with Products settings).

U8. Back Office

1. Day overview, sales ledger, day close, shift, time clock, void and discount reports, roles overview.

Part V — Full setup order checklist (recommended)

Do in this order for a new restaurant:

1. Activate POS + Admin login
2. Company Details + Branches
3. Tax + Units + Departments
4. Categories + Menu items + Addons attached
5. Extra charges + Payment types
6. Floor areas + Tables
7. Printers + Printer mapping + test print
8. Users + Roles + PIN
9. Ingredients + Recipes (if you track food cost)
10. Storage locations + Vendors + PO + Receiving
11. Delivery APIs + Riders (if needed)
12. SoftPOS card terminal (if needed)
13. Gift cards / vouchers / loyalty (if needed)
14. ZATCA details (KSA)
15. Database backup / export
16. Full test: order → kitchen → pay → one report

Part W — Common problems (all modules)

Problem	What you can do
Addon not showing on order	Attach addon to dish in Masters / Addons.
Discount buttons missing	Admin: Settings → Discount; then reopen table.
Extra charges missing on floor	Admin: Settings → Extra Charges, set Active.
Tax looks wrong on bill	Admin: Settings → Tax / Menu details; do not type tax on floor.
Change Table / Merge not visible	Your role needs Change Table permission.
Split / Settle not visible	Your role needs Settle permission (Cashier/Admin).
Confirm split is grey	Remaining is not 0 - add more payment.

Problem	What you can do
Food voucher not applying	Create voucher in Settings; enter correct code on Settle.
KOT on wrong printer	Fix Printer Mapping.
Stock not increasing after delivery	Use Stock receiving (not only create PO).
Transfer done but qty wrong	Check from/to location and finish transfer.
Report empty	Check date range and branch.
Staff cannot open Stock	Give stock right in Role Privilege.
Card pay always fails	Check SoftPOS bridge; turn off training simulate for live.
Online order not coming	Test Delivery API connection; check credentials.
Food cost report looks wrong	Fix recipe quantities and ingredient units.
Tile says coming later	Feature not available yet - skip.
Cannot activate POS	Check company code and internet; call Isarva.
Wrong branch orders	Change branch on top bar, then continue.

Part X — Daily closing checklist

1. Settle remaining tables and unsettled payments.
2. Finish delivery / online orders or hand over properly.
3. Review Payments Received and Sales Summary.
4. Day close for the branch (authorised user).
5. Sign out. Do not leave Admin unlocked overnight.

Part Y — Security rules for customers

1. Each staff uses own login.
2. Lock or sign out when leaving the counter.
3. Do not share Admin password on WhatsApp groups.
4. Disable users who left the job the same day.
5. Do not type card numbers in order notes.
6. Report strange logins or missing cash to Owner at once.

Quick start summary (first day)

1. Open website → **Activate POS** with company code.
2. **Sign in** as Admin.
3. **Company Details and Branches** → select branch.
4. **Tax / Departments / Menu / Addons.**
5. **Tables + Printers.**
6. **Users.**
7. **Stock** basics (vendors, locations, receiving) if you use inventory.
8. Test order + payment + open one report.
9. Start live sales.

Support

For activation code, training, or any module help, contact your **Isarva support** channel from your onboarding message.

Keep this guide with the Owner and Admin.

Document control

Version	Date	Author	Notes
1.0	2026-09-11	Isarva	First customer step-by-step guide
1.1	2026-09-11	Isarva	Added full Settings tabs, printers, catalog, ingredients, stock transfer, receiving, reports and related modules
1.2	2026-09-11	Isarva	Added Floor ticket guide: Discount, Extra charges, Tax/VAT, Save/KOT, Change Table, Merge, Split, Settle, Food voucher / gift card
